

● What is Python?

- Python is a programming language that lets you work more quickly and integrate your systems more effectively.
- It was designed by Guido Van Rossum on February 20th 1991.
- It is an interpreted, object-oriented, high-level programming language with dynamic semantics.
- Its high-level built in data structures, combined with dynamic typing and dynamic binding, make it very attractive for Rapid Application Development, as well as for use as a scripting or glue language to connect existing components together.
- Most commonly used python version is 2.7.11 whereas the latest version as of now is 3.8.3.
